

# CORONAVIRUS HIGH RISK LIST

People at high-risk for severe illness from COVID-19 include older adults, and people of all ages with underlying medical conditions.

COVID-19 is twice as contagious as the seasonal flu

People remain contagious for longer than with the seasonal flu

People who feel "fine" are capable of transmitting COVID-19 to others

That is why people at higher risk need to remain shielded for at least 12 weeks

Social distancing is the most effective way to slow the spread and to protect yourself, your family and your colleagues
